Summary:

I've always been passionate about finding ways to automate processes and make systems run more efficiently. Over time, I've built my skills in Python, Node.js, and the MERN stack, which have led me to explore the world of DevOps. I'm particularly excited about technologies like Docker, Kubernetes, Jenkins, and AWS, which help me create scalable, reliable solutions. Now, I'm looking for a DevOps Engineer role where I can continue to learn, help streamline deployments, improve infrastructure, and work with a great team to bring impactful solutions to life.

Work Experience:

Software Engineer | eDariba – Part time

Jan. 2024 – Nov. 2024

- Developed scalable back-end solutions with **Python** using the **Frappe framework**, optimizing system performance and scalability.
- Customized **WordPress** themes to enhance site performance and increase user engagement.
- Automated infrastructure using **Docker** and **Kubernetes**, streamlining deployment processes and ensuring scalability.
- Implemented **CI/CD pipelines** with **Jenkins** to facilitate continuous integration and delivery.

WordPress Developer & Project Coordinator | Qayedny – freelance

Jul. 2024 – Aug. 2024

- Optimized functionality across 20+ pages, ensuring responsive design and a seamless user experience.
- Trained team members on Jira for efficient task management and improved organizational workflows.
- Aligned website design with brand identity, delivering a high-performing, responsive website.

Senior WordPress Developer | Tech Village for Marketing Solutions – full time

May. 2024 – Jun. 2024

- Developed custom plugins to meet client requirements, enhancing site performance and user experience.
- Enhanced site performance and streamlined the login flow for Digital Leadership, resolving complex plugin conflicts.
- Collaborated with the team to ensure design consistency, code quality, and adherence to SEO best practices.

Software Engineer | ensoulify – part time

Mar. 2021 – Oct. 2022

- Designed and maintained responsive front-end applications using **CSS**, **SASS**, **Tailwind**, and **DaisyUI**.
- Built scalable back-end functionalities with **Python** in the **Frappe framework** and automated server infrastructure using **Docker**.
- Customized **WordPress** themes for **SEO** optimization and user engagement.
- Configured the data layer with **Google Tag Manager** to track user interactions and enhance website performance.

Front-end Developer | BMA – Brand Maker Agency – part time

Jan. 2020 – May. 2021

- Built and customized WordPress sites from setup to launch, ensuring brand consistency across all projects.
- Improved site speed and performance by resolving theme/plugin conflicts and implementing SEO best practices.
- Architected a secure, scalable e-commerce platform within WordPress, driving a 90% growth in sales.

Projects:_____

- DevOps & Full-tack Developer |** DEPI Final Project Aug. 2024 – Oct. 2024
Developed a Dockerized **Django** application for the **DEPI scholarship graduation project**, integrating **Docker** and **Django** for scalability. Contributed to backend services, implemented **CI/CD pipelines** with **Jenkins**, and assisted in configuring **Kubernetes** for microservice scalability. Optimized API integration and database management, ensuring project efficiency.
- Team Lead & Full-Stack Developer |** Betrend – Graduation project Jan. 2022 – Feb. 2022
Developed a scalable, microservices-based application hosted on an **Oracle server** using **Frappe**, **Docker**, **Vue.js**, **Flask**, **Redis**, and **MariaDB**. **Led a 4-member team**, introduced **Jira** for project management, designed UI/UX with **Adobe XD**, and integrated AI functions via **Flask APIs**. Deployed on **Oracle VPS** ensuring scalability and reliability.
- Facebook API Integration Project |** Freelance Feb. 2021
Developed a project to collect and manage 82,867 Facebook users' interests using **Python**, **Facebook API**, **MongoDB Atlas**, and **Google Colab**. Automated data collection, managed large datasets efficiently, and implemented robust error handling for data accuracy.

Education:_____

- Bachelor of Computer Science (B.Sc.) – Modern Academy** Aug. 2018 – Aug. 2022
Accumulative GPA: **3.17 (Very Good)** Graduation Project: **A+**

Courses:_____

- DevOps Engineer |** DEPI Egypt
Innov Egypt | TIEC
React Course | Scrimba
Arduino Course | IEEE HTI

Technical skills:_____

- Languages |** Node.js, JavaScript, Python, PHP.
Front-End | React.js, Jinja, HTML, CSS, Bootstrap, SCSS, Tailwind, Daisy UI, Preline.
Back-End | Express.js, WordPress, Flask, Frappe Framework, RESTful API, Postman.
Databases | MongoDB, MySQL, MariaDB, SQLite3, PostgreSQL.
DevOps | Docker, Git / Version Control, Agile Methodologies, Jenkins, Kubernetes (K8s).
UI/UX Design | Figma, Adobe XD, Bootstrap Studio.

Volunteering Experience:_____

- GDSC Member |** GDSC Modern Academy Oct. 2019 – Aug. 2020
Actively participated in events and workshops, contributing to the community and gaining exposure to Google technologies. Collaborated with members to support initiatives and expand knowledge in areas like mobile development, cloud computing, and machine learning.
- PM Coordinator |** Enactus Modern Academy Oct. 2018 – Aug. 2019
Led research efforts on various projects, including sustainable energy solutions, and contributed to the development of strategic business models. Assisted in project planning, coordination, and management, gaining experience in team collaboration and problem-solving.

Achievements:_____

- Micromouse Competition |** IEEE HTI Student Branch Jul. 2019 – Jun. 2019
Designed and programmed autonomous robots to navigate a maze in a competitive environment, showcasing problem-solving, collaboration, and programming skills.
